

Ruby On Rails Coding Assessment

Description:

Build a simple rails application that consists of a receptionist portal & doctor portal which performs the following tasks,

1. A single login page for both portals.
2. Receptionists can register a new patient & perform CRUD operations.
3. Doctors can view registered patients & view the graph that represents the number of patients registered vs days.

Feel free to add/modify any functionalities on top of the above-mentioned requirements for added advantages.

Note: Applicants are expected to use only Rails for the backend & PostgreSQL for the database. (Usage of other DBs will not be acceptable)

Expectation:

1. Problem-Solving
2. A proper **Auth** implementation
3. **Creativity** beyond the requirements

Outcome (Need to submit):

1. Code (via GitHub or GDrive with necessary access)
2. A video demo
3. Deployed link (Not mandatory but added advantage)

You are expected to submit the assessment through the following link -
